Office Action Summary

Art Unit: 1711

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-3 and 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tarumi et al (USP 5837774) in view of Stoetzer (USP 451824).

(Stoetzer is of record on PTO-1449, paper no. 2).

Tarumi disclose curable fluoropolyether rubber composition comprising (A) fluoropolyether compound, (B) polytetrafluoroethylene, (c) organohydrogenpolysiloxane and (D) hydrosilylation reaction catalyst (abstract). These components are later described at length in the appropriate columns.

Tarumi fails to disclose the (claimed) silver particles (component (D) of instant claim 1).

Art Unit: 1711

Stoetzer discloses a conductive composition comprising silver particles (abstract). Such a composition is suitable for use in forming applied coatings having very good electrical conductance properties and is also more economical to produce and also possess advantageous properties (col 1, lines 37-54).

Therefore it would have been obvious in view of the advantages disclosed by Stoetzer to incorporate the silver particles of Stoetzer into the composition of Tarumi and thus arrive at instant invention.

2. Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to U.K. Rajguru whose telephone number is (703) 308-3224. The examiner can normally be reached on Monday-Friday from 9:30 am to 6:00 pm.

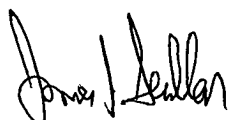

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jim Seidleck, can be reached on (703) 308-2462. The fax phone number for the organization where this application or proceeding is assigned is (703) 305-3599.
